

The wire forming experts

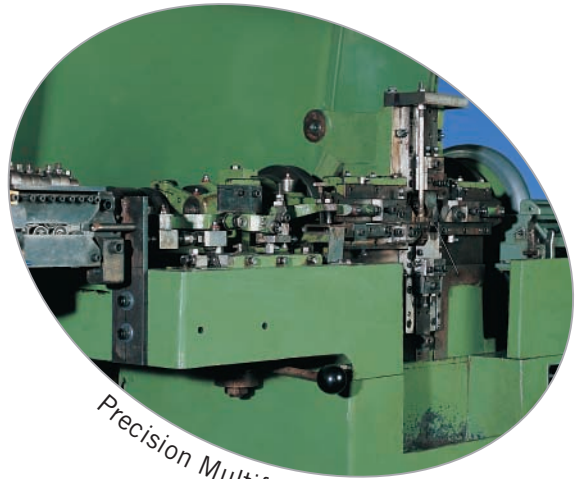

Creating formed components...

Fairfit specializes in the economical production of wire and strip components formed in a single process.

Our well-equipped facility includes several multiform machines, power presses and spot welding machines, enabling us to produce a diverse range of parts - from short-run to large quantities.

We make extensive use of electronic sensors connected to Programmable Logic Controllers in our tooling and machinery. This means we can ensure reliable process operation and consistent high-quality production.

We have an in-house tool design office and toolroom to support the manufacturing facility in the design and building of new tooling, as well as servicing existing tools.

Precision Multiform Machine

Parts Produced on Multiform Machines

We make a wide range of parts...

For over 40 years, we've produced a variety of parts for many different industry sectors such as:

Shopfitting, packaging, lighting, apparel, jewellery, marine, electrical, construction, aeronautical, electronics, military, architectural, medical, general industry.

...from a wide range of materials

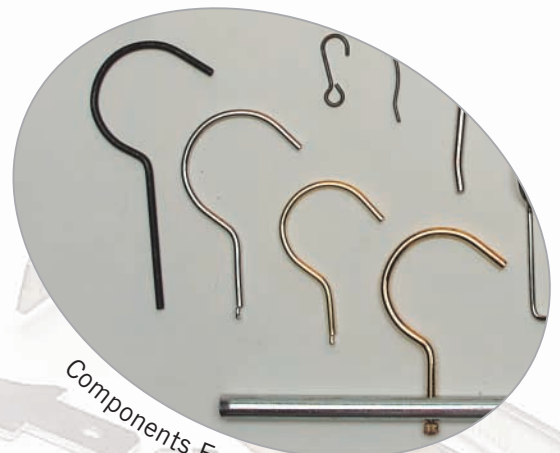

Our highly experienced tradesmen have worked with many different metal types including: steel, aluminum, stainless, spring stainless, brass, copper, phosphor bronze, beryllium copper, nickel silver, tin plate, kovar, pre-painted and pre-plated alloys.
