

Flush fitting stainless steel valves

Fairfit flush fitting stainless steel valves are the lightweight, compact and drag-free solution for through-hull fittings.

Not only are they designed to create a smoother finish, they're also built to last. The body of the valve is made of 316 stainless steel for strength and rigid installation. The bottom through hull sleeve and plunger are made from Ertalyte which is faired off to fit the hull profile.

Fairfit valves are world-renowned and race-proven on many leading yachts over the past 15 years. These include past and present America's Cup contenders, Whitbread Maxis and W60's, Volvo Ocean 60's. Not to mention numerous privately owned racing and mega yachts to inshore cruising boats.

With Fairfit flush fitting valves on board, it's no wonder so many of these yachts enjoyed such an excellent finish.
